

INTERFLAM 2010

TABLE OF CONTENTS

Volume 1

	Page No.
<i>Preface</i>	<i>iii</i>
<i>Co-organisers and Programme Committee</i>	<i>iv</i>
KEYNOTE	
Thirty years of Interflam - How fire research has evolved since 1979 <i>Marc Janssens, Southwest Research Institute, USA</i>	1
FIRE RESISTANCE AND STRUCTURAL FIRE PERFORMANCE	
Evaluating the local fire response of steel beams by comparison to standard fire tests <i>Ann Jeffers, University of Michigan and E Sotelino, Virginia Tech, USA</i>	11
Comparison of resultant steel temperatures using travelling fires and traditional methods: Case study for the informatics forum building <i>Anna Jonsdottir, G Rein, University of Edinburgh and J Stern-Gottfried, Arup Fire, UK</i>	23
Fire protection of bridge cables <i>Yaping He, University of Western Sydney, D Verghese, Meinhardt Australia Pty Ltd and I Bennetts, Noel Arnold and Associates, Australia</i>	33
Intermediate detail modelling of structural connections in fire using shell elements <i>Graeme Flint, L Lim, A Jowsey, H Sarrazin, S Lamont, B Lane, Arup Fire, UK</i>	45
Structural fire performance of concrete-filled steel hollow sections: State-of-the-art and knowledge gaps <i>David Rush, L Bisby, University of Edinburgh and A Jowsey, B Lane, Arup Fire, UK</i>	57
Fire protection ability of wood products – A status report <i>Birgit Östman, SP Trätekt, Sweden</i>	71
On the fire performance of wood-wood-wood and wood-steel-wood connections using bolts and dowels as fasteners <i>George Hadjisophocleous, L Peng, Carleton University and J Mehaffey, M Mohammad, FPInnovations, Canada</i>	83
Modelling the fire resistance of structural insulated panels: Heat transfer <i>Danny Hopkin, BRE Global Ltd/Loughborough University, V Silberschmidt, Wolfson School of Mechanical & Manufacturing Engineering, J El-Rimawi, Loughborough University and T Lennon, BRE Global Ltd, UK</i>	95
Thermal and stress analysis of glazing systems under fire conditions <i>Siaka Dembele, R Rosario, J Wen, Kingston University and I Williams, P Warren, Pilkington European Technical Centre, UK</i>	107
Axial deformation of concrete exposed to fire and loading <i>Elin Jensen, Jacob Van Horn and M Joshi, Lawrence Technological University, USA</i>	121

The effect of fire curve on concrete spalling <i>Lars Boström, R Jansson, SP Fire Technology, Sweden</i>	133
---	-----

EXTINGUISHMENT / SUPPRESSION

Water flows on vertical surface and around corners of corrugated cardboards for sprinkler protection of rack storage <i>Yibing Xin, J de Vries, S D'Aniello, FM Global, USA</i>	143
---	-----

A porous media model for sprinkler wetting <i>Joel Sipe, N Dembsey, Worcester Polytechnic Institute, USA</i>	153
---	-----

Assessment of the effects of air movement imparted by large diameter high volume low velocity ceiling fans on fire sprinkler operation and effectiveness <i>Martin Pabich, Underwriters Laboratories Inc., and P Gore Willse, Global Asset Protection Services, USA</i>	165
---	-----

Spray pattern measurements of selected fire sprinklers <i>Xiangyang Zhou, S D'Aniello, H-Z Yu, FM Global, USA</i>	177
--	-----

Flame suppression by water sprays: Flame-spray interaction regimes and governing criteria <i>Alexander Snegirev, A Lipjainen, V Talalov, St.Petersburg State Polytechnic University, Russia</i>	189
--	-----

Quantitative assessment of sprinklers on sustainable development <i>Christopher Wieczorek, B Ditch, L Gritzko, R Bill Jr, FM Global, USA</i>	201
---	-----

Assessment of the gas cooling capabilities of compressed air foam systems in fuel- and ventilation-controlled compartment fires <i>Jianping Zhang, A O' Neill, M Delichatsios, FireSERT, University of Ulster, UK</i>	213
---	-----

Simplified models of interactions of foam jets with hot smoke layers in under-ventilated fire conditions according to full-scale experiments <i>Paul Jourda, M Briffaud, J Hattenberger, D You, CEA, J-P Vantelon, CNRS and G Mitanchez, GIMAEX, France</i>	223
---	-----

Improvements of test method for water mist systems - CEN/TS 14972:2008, Annex A.3. <i>Anders Håkansson, D Langenbach, P van Hees, Lund University, Sweden, T Hermodsson, Danish Institute of Fire and Security Technology, Denmark and B Husted, Stord/Haugesund University College, Norway</i>	235
--	-----

Early detection of cable fires using image processing <i>Yulianto Nugroho, Suwarno, M Widyanto, Yanuar, E Jakti, G Alif, University of Indonesia, Indonesia</i>	247
--	-----

Performance evaluation framework for vision-based fire detection <i>Steven Verstockt, Ghent University - IBBT/University College West Flanders, A Vanoosthuyse, University College West Flanders, B Merci, N Tilley, Ghent University, B Sette, Warringtonfiregent (WFRGent NV) and C Hollemeersch, P Lambert, R Van de Walle, Ghent University – IBBT, Belgium</i>	257
--	-----

FIRE TESTING AND MEASUREMENT TECHNIQUES

Pyrolysis combustion flow calorimetry: A tool for flame retardant development and fundamental combustion science <i>Alexander Morgan, University of Dayton Research Institute, USA</i>	269
--	-----

Convective heat transfer in the cone calorimeter revisited <i>Marc Janssens, C Gomez, Southwest Research Institute, USA</i>	281
Alternate substrates for measuring cigarette ignition propensity using ASTM E 2187 <i>Richard Gann, E Hnetkovsky, W Guthrie, NIST, USA</i>	291
Measurement and prediction of smoke deposition in fires <i>Craig Beyler, Hughes Assocs, S Riahi, Hughes Assocs/The George Washington University and J Hartman, United States Naval Academy, USA</i>	303
A new rapid analysis method for fire retardants in polymers <i>Gary Stevens, P Baird, H Herman, W Mortimore, GnoSys UK Ltd, University of Surrey, UK</i> ...	315
Measurement of incident radiant heat flux with the plate thermometer <i>Ulf Wickström, SP Technical Research Institute, Sweden</i>	327
Comparison of furnace temperature and incident heat flux in wall and floor furnaces controlled by six different temperature sensors <i>Mohamed Sultan, Institute for Research in Construction, National Research Council Canada, Canada</i>	341
Repeatability of instrument measurements in large-scale fire reconstruction experiments <i>David Sheppard, US Dept of Justice, Bureau of Alcohol Tobacco Firearms and Explosives, USA</i>	353
Chemical species and temperature mapping in full scale underventilated compartment fires <i>Andrew Lock, M Bundy, E Johnsson, K Opert, A Hamins, NIST, USA and C Hwang, Daejeon University, K Yong Lee, Andong National University, South Korea</i>	365
FIRE PERFORMANCE OF MATERIALS AND PRODUCTS	
A study of fire performance of textile membranes used as building components <i>Per Blomqvist, P Andersson, SP Technical Research Institute, Sweden</i>	375
Use of fire blocking and barrier systems to comply with fire tests for furnishings <i>Gordon Damant, Damant and Assocs, USA</i>	387
Effect of rack mounted PV modules on flammability of roofing assemblies <i>Mahmood Tabaddor, R Backstrom, P Gandhi, Underwriters Laboratories, Inc., USA</i>	397
Multi-scale simulation of the fire behaviour of a FRP sandwich composite – Comparison of model results with experimental data. <i>Damien Marquis, E Guillaume, C Chivas-Joly, L Bustamante-Valencia, LNE, M Pavageau, EMAC, J Gutierrez, DCNS, CEMMAN, C Cuffe, DCNS, France</i>	407
Euroclass predictions for developing wood based products with improved fire performance <i>Lazaros Tsantaridis, B Östman, SP Trätek / Wood Technology, Sweden and T Hakkarainen, VTT Technical Research Centre, Finland</i>	419
Electrical circuit and cable testing <i>Gabriel Taylor, Nuclear Regulatory Commission, K McGrattan, NIST, S Nowlen, Sandia National Laboratories, USA</i>	429
Prediction of fire classification of cables - Extended application of test data <i>Björn Sundström, M Försth, P Johansson, SP Technical Research Institute, Sweden and S Grayson, Interscience Communications Ltd, T Journeaux, Europacable, UK</i>	439

PYROLYSIS MODELLING

Numerical simulation of polymer materials in standard fire tests: Pyrolysis and the impact of residue formation <i>Florian Kempel, B Schartel, A Hofmann, BAM Federal Institute for Materials Research and Testing, Germany and G Linteris, NIST, R Lyon, R Walters, Federal Aviation Association, S Stoliarov, University of Maryland, USA</i>	451
The role of thermal decomposition kinetics in the burning of polymers <i>Richard Lyon, Federal Aviation Administration, N Safronava, SRA International, S Stoliarov, University of Maryland, USA</i>	463
Thermal degradation kinetics modeling for pyrolysis modeling using fire retarded thermoset polymer resins <i>Esther Kim, S Shivkumar, N Dembsey, WPI, USA</i>	475
Measurement and modelling of thermochemical properties of porous materials as a function of temperature during multi-stage decomposition processes <i>Lucas Bustamante Valencia, E Guillaume, D Marquis, C Chivas-Joly, B Hay, V Scoarnec, LNE, T Rogauame, Institut Prime, France and G Rein, J Torero, University of Edinburgh, UK</i>	487
On the effect of dimensional and morphological changes in cellular plastics during combustion – cone calorimeter and gasification testing <i>Roland Krämer, J Gilman, NIST, USA and N Witten, Zotefoams PLC, UK</i>	499
A model of burning for charring polymers <i>Stanislav Stoliarov, University of Maryland and S Crowley, R Walters, R Lyon, Federal Aviation Administration, USA</i>	509
Heat transfer, foam decomposition, and container pressurization: Comparison of experimental and modeling results <i>Kenneth Erickson, A Dodd, R Hogan, K Dowding, Sandia National Laboratories, USA</i>	521
Examination of the spontaneous transition from smoldering to flaming: Comparison of simulations and experiments <i>Amanada Dodd, Sandia National Laboratories, C Lautenberger, A Fernandez-Pello, University of California at Berkeley and O Putzeys, Exponent Failure Analysis Associates, USA</i>	533
MATERIALS FLAMMABILITY	
Nondimensional commodity classification and an analysis of upward flame spread <i>Michael Gollner, F Williams, University of California, K Overholt, A Rangwala, Worcester Polytechnic Institute and J Perricone, Creative FPE Solutions, USA</i>	545
Combustibility characterization of oxidizer-fuel mixtures using the fire propagation apparatus <i>Elizabeth Buc, Fire and Materials Research Laboratory and M Khan, FM Global, USA</i>	557
Burning behaviour of intumescent coating and nanoparticles applied on flaxboard <i>Jianping Zhang, M Delichatsios, M McKee, S Ukleja, FireSERT, University of Ulster, UK</i>	569
Melting rate of polyurethane foam in a vertical orientation <i>Charles Fleischmann, D Pau, University of Canterbury, New Zealand</i>	581

FLAME RETARDANTS

The relationship of sustainability to flammability of construction materials <i>Robert Bill Jr, K Meredith, N Krishnamoorthy, S Dorofeev, L Gritz, FM Global, USA</i>	593
Fire safety versus environmental concerns – how can we achieve sustainable solutions for flame retardants? <i>Adrian Beard, Clariant Produkte (Deutschland) GmbH, Germany</i>	605
New fire safety aspects for TVs and recent views of FRS and Eco-labels <i>Lein Tange, R Borms, ICL-IP Europe, The Netherlands and P Georlette, ICL-IP, Israel</i>	615
Characterizing particle emissions from burning polymer nanocomposites <i>Marc Nyden, M Zammarano, R Harris, R Kramer, N Uddin, N Marsh, NIST, USA</i>	623
Synergistic flame retardant halogen-free combination of aluminium phosphinate and metal oxides in PBT <i>Emanuela Gallo, University of Naples, Italy / BAM, Germany, B Schartel, U Braun, BAM, Germany and P Russo, D Acerno, University of Naples, Italy</i>	629
Improvement of thermal and fire retardancy properties of a (ammonium polyphosphate/melamine polyphosphate/ metal oxide nanoparticles/) ternary system in PMMA by experimental design <i>Blandine Friederich, Centre de Recherche Public Henri Tudor, Luxembourg / Université Paul Verlaine Metz, France, A Laachachi, D Ruch, V Toniazzo, Centre de Recherche Public Henri Tudor, Luxembourg and M Ferriol, M Cochez, Université Paul Verlaine Metz, France</i>	641
New phosphorus-based flame retardant for engineering thermoplastics and styrenics <i>Robert Stenekes, S Goebelbecker, ICL-IP Europe, The Netherlands, S Levchik, P Moy, ICL-IP America, USA and I Finberg, ICL-IP, Israel</i>	653
Prominent effect of smooth carbon layer on flame retardancy <i>Erika Nakashima, M Yukumoto, K Takeda, Chubu University, T Ihara, Ihara Gosei Co Ltd and T Ueno, The University of Tokyo, Japan</i>	661
Combustion and flammability behaviour of unsaturated polyester / phenolic resin blends <i>Baljinder Kandola, P Luangtriratana, University of Bolton, UK</i>	673
IGNITION AND FLAME SPREAD MODELLING	
Numerical investigation of the ignition delay time in PMMA at high heat fluxes <i>Nicolas Bal, G Rein, University of Edinburgh, UK</i>	685
Bench-scale flammability experiments: Determination of material properties using pyrolysis models for use in CFD fire simulations <i>Marcos Chaos, M Khan, N Krishnamoorthy, J de Ris, S Dorofeev, FM Global, USA</i>	697
Application of bench-scale material flammability data to model flame spread in medium-scale parallel panel test <i>Niveditha Krishnamoorthy, M Chaos, M Khan, P Chatterje, Y Wang, S Dorofeev, FM Global, USA</i>	709
Numerical simulation of polymeric materials in UL 94 test: Competition between gasification and melt flow/dripping <i>Florian Kempel, B Schartel, A Hofmann, BAM, Germany, K Butler, NIST, USA and E Oñate, S Idelsohn, R Rossi, J Marti, CIMNE, Spain</i>	721

A flame model for melting and dripping of polymers
Sergio Idelsohn, J Marti, E Oñate, R. Rossi, CIMNE, Spain and K Butler, NIST, USA 731

CFD MODELLING

Modeling the burning of complicated objects using Lagrangian particles
Kevin McGrattan, R McDermott, W Mell, G Forney, NIST, J Floyd, Hughes Associates, USA and S Hostikka, A Matala, VTT Research Centre, Finland..... 743

Modeling soot deposition using large eddy simulation with a mixture fraction based framework
Jason Floyd, Hughes Associates and R McDermott, NIST, USA 755

Coupling a network HVAC model to a computational fluid dynamics model using large eddy simulation
Jason Floyd, Hughes Associates, USA..... 765

CFD simulation of radiative heat transfer between a buoyant turbulent fire and inert parallel panels
Prateep Chatterjee, N Krishnamoorthy, Y Wang, J de Ris, S Dorofeev, FM Global, USA..... 777

CFD study of flow field phenomena in scaling up of small-scale smoke extraction ` experiments
Nele Tilley, P Rauwoens, B Merci, Ghent University, Belgium 789

HUMAN BEHAVIOUR: EVACUATION AND EGRESS

Study on the influence of smoke and exit signs on fire evacuation - analysis of evacuation experiments in a real and virtual hotel
Margrethe Kobes, Netherlands Institute for Safety / VU University Amsterdam, I Helsloot, VU University Amsterdam, B de Vries, Eindhoven University of Technology and J Post, N Oberijé, K Groenewegen, Netherlands Institute for Safety, The Netherlands 801

Uncontrolled vs controlled emergency procedures in high speed passenger trains
Jorge Capote, D Alvear, A Cuesta, University of Cantabria, Spain 813

Quantitative validation of simulated visibility in smoke laden environments
Qihui Zhang, Geodata SpA, Italy and P Rubini, University of Hull, UK..... 825

Human behavior in road tunnel fires: Comparison between egress models (FDS+Evac, STEPS, Pathfinder)
Enrico Ronchi, N Berloco, P Colonna, Polytechnic of Bari, Italy and D Alvear, J Capote, A Cuesta, University of Cantabria, Spain 837

A study on risk-based evacuation safety design method in fire for office buildings
T Tanaka, Kyoto University, D Nii, National Institute for Land and Infrastructure Management, J-i Yamaguchi, Obayashi Corporation, H Notake, Shimizu Corporation and Y Ikehata, Taisei Corporation, Japan 849

Fire response performance model for a systematic analysis of evacuation safety in buildings – A case study of a fire in a football stadium
Jos Post, M Kobes, N Oberijé, J Weges, Netherlands Institute for Safety, The Netherlands.... 861

Microscopic modelling of crowd movement at major events
Volker Schneider, R Könnicke, IST GmbH, Germany 873

Investigating the impact of culture on evacuation behaviour
Edwin Galea, S Deere, G Sharp, L Filippidis, L Hulse, University of Greenwich, UK..... 879

FIRE AND EMERGENCY RESPONSE

Quantifying efficiency in fire fighting operations <i>Stefan Svensson, Swedish Civil Contingencies Agency, Sweden</i>	893
Developments in positive pressure ventilation <i>Stephen Kerber, Underwriters Laboratories Inc, USA and Stefan Svensson, Swedish Civil Contingencies Agency, Sweden</i>	905
Simulation of the flow induced by positive pressure ventilation fan under wind driven conditions <i>Arun Mahalingam, M Patel, E Galea, University of Greenwich, UK</i>	913
Wind driven fires in structures <i>Daniel Madrzykowski, S Kerber, NIST, USA</i>	925
Chemical exposure and protection of fire site workers <i>Tuula Hakkarainen, K Tillander, H Järnström, T Paloposki, VTT Technical Research Centre of Finland and J Laitinen, M Mäkelä, P Oksa, Finnish Institute of Occupational Health, Finland</i>	937
Residential building fire test scenarios to investigate firefighter exposure to smoke <i>Jacob Borgerson, T Fabian, P Gandhi, Underwriters Laboratories Inc., USA</i>	949
Predicting inward leakage for negative pressure conditions in a firefighter respirator <i>Rodney Bryant, NIST, USA</i>	961

CODES AND REGULATIONS

The quest for performance-based building regulation: From Hammurabi to the IRCC <i>Richard Bukowski, Rolf Jensen and Associates, USA</i>	971
Fire test standards used in US codes and regulations <i>Marcelo Hirschler, GBH International, USA</i>	983
Developments in fire safety engineering methodology for classifying products on European trains <i>Peter Briggs, C Dean, C Hughes, Exova Warringtonfire, UK</i>	995
Fire compartment sizes and the benefit of sprinklers - A risk based approach using Monte Carlo simulations. <i>Craig English, S Bennett, Interscience Communications Limited (Hoare Lea Fire), UK</i>	1007
Active fire protection measures and probabilistic system analysis as a basis for a national fire safety concept in Germany <i>Christoph Klinzmann, hhpberlin - Ingenieure für Brandschutz GmbH and D Hosser, Technische Universität Braunschweig, Germany</i>	1019
A risk-informed framework for performance-based structural fire protection according to the Eurocode fire parts <i>Cornelius Albrecht, D Hosser, Technische Universität Braunschweig, Germany</i>	1031

Author Index

Volume 2

COMPARTMENT FIRE EXPERIMENTS AND MODELLING

Validation of numerical simulations of compartments with forced or natural ventilation using the fire and smoke simulator (FSSIM), CFAST and FDS
Justin Williamson, C Beyler, J Floyd, Hughes Associates, Inc., USA..... 1043

Smoke movement induced by buoyancy and total pressure between two confined and mechanically ventilated compartments
Hughes Pretrel, L Audouin, IRSN, France 1053

Comprehensive data set for validation of fire growth models: Experiments and modeling
Chris Lautenberger, C Fernandez-Pello, University of California, W Wong, N Dembsey, Worcester Polytechnic Institute, A Coles, Arup Fire, USA..... 1065

Experimental review of the homogeneous temperature assumption in post-flashover compartment fires
Jamie Stern-Gottfried, University of Edinburgh / Arup Fire, G Rein, J Torero, University of Edinburgh, UK 1077

TRANSPORTATION AND TUNNEL FIRES

Modelling factors that influence CFD fire simulations of large tunnel fires
Fuchen Jia, Z Wang, E Galea, University of Greenwich, UK..... 1091

Modelling the interaction between suppression and ventilation systems in tunnel fires
George Hadjisophocleous, Y Ko, Carleton University, Canada 1103

Use of computer modeling for the interpretation of midscale tunnel fire test results
Elizabeth Blanchard, LEMTA / CSTB, P Boulet, LEMTA, S Desanghere, E Cesmat, CSTB, France..... 1115

Fire spread in car parks: The contribution of materials on the exterior of modern vehicles
David Crowder, R Cullinan, BRE Global, UK..... 1127

Experimental and numerical investigations of the burning behavior of vehicle materials: Small, intermediate and large scale investigations
Anja Hofmann, S Krüger, A Klippel, BAM, Germany 1139

On the fire and explosion risk profile of alternative fuels to kerosene in civil transportation aircrafts
Guy Marlair, A Vignes, A Janès, J-P Bertrand, B Tribouilloy, N Eynaud, INERIS, France..... 1151

URBAN AND WILDLAND FIRES

A model for post-earthquake fire spread considering the damage of structural members caused by seismic motion and heating of fire
Keisuke Himoto, T Tanaka, Kyoto University, K Mukaibo, Ritsumeikan University, Y Akimoto, Mitsubishi UFJ Research & Consulting, R Kuroda, Ichijo Corporation and A Hokugo, Kobe University, Japan..... 1163

Evaluation of the fire safety performance of Kyoto City in post-earthquake fire
Tomoaki Nishino, S-i Tsuburaya, K Himoto, T Tanaka, Kyoto University, Japan..... 1175

Quantifying wind driven firebrand penetration into building vents using full scale and reduced scale experimental methods
Samuel Manzello, S-H Park, S Suzuki, J Shields, NIST, USA..... 1189

Effectiveness of pre-applied wetting agents in prevention of wildland urban interface fires
Joe Urbas, P Desai, University of North Carolina-Charlotte, USA..... 1201

FIRE ENGINEERING

A holistic approach to fire risk management for buildings in the UK
Selda Konukcu, D Bouchlaghem, Loughborough University, UK 1213

Pool fires – toward a general correlation
Benjamin Ditch, J de Ris, FM Global and T Blanchat, Sandia National Laboratories, USA..... 1225

Making the biggest difference: Selecting priorities for fire safety science and engineering
John Hall, NFPA, USA..... 1237

Tenability analysis for fire experiments conducted in a full-scale test house with basement fire scenarios
Joseph Su, N Bénichou, A Bwalya, G Lougheed, B Taber, P Leroux, National Research Council Canada, Canada 1247

Towards an integrated performance-based design approach for life safety across different building use groups
Alberto Alvarez, B Meacham, Worcester Polytechnic Institute, USA..... 1259

Semi-quantitative analysis of the need for fire-resistance of façades in a sprinklered high rise building
Michael Haas, P van de Leur, DGMR Consulting Engineers, The Netherlands..... 1271

FIRE INVESTIGATION AND RECONSTRUCTION

Electric arc explosions
Vytenis Babrauskas, Fire Science and Technology Inc., USA..... 1283

Thermal malfunction criteria of fire safety electrical equipment in nuclear power plants
Laurent Gay, R Gracia, EDF R&D and E Wizenne, EDF SEPTEN, France..... 1297

Target compound ratios and chemometric analyses for the individualization of neat ignitable liquids and residues from fire debris
J Graham Rankin, A Bondra, C Trader, Marshall University and W Lu, P Harrington, Ohio University-Athens, USA 1305

A study of the effect of high temperature on the physicochemical properties of natural building limestones
Kyriacos Kyriakides, G Hadjisophocleous, Carleton University, Canada and L Petrou, I Ioannou, University of Cyprus, Cyprus..... 1321

The use of a stochastic fire safety engineering tool for fire scene reconstruction
A Muller, Université Paris–Est / Université de Haute Alsace, F Demouge, Ph Fromy, Université Paris–Est, M Jeguirim, J-F Brihac, Université de Haute Alsace and J-P Vantelon, Université de Poitiers, France 1329

“Clean burn” fire patterns – A new perspective for interpretation
Steven Carman, Carman & Associates Fire Investigations, USA..... 1341

Analysis of cooking fires in Norway
Anne Steen-Hansen, J Stensaas, C Sesseng, R Stølen, SINTEF NBL, Norway..... 1353

2005 Buncefield vapor cloud explosion: Unraveling the mystery of the blast <i>Scott Davis, P Hinze, O Hansen, K van Wingerden, GexCon, USA</i>	1365
---	------

SMOKE AND TOXICITY

Influence of carbon nanotubes on fire behavior and on decomposition products of thermoplastic polymers <i>Carine Chivas-Joly, E Guillaume, S Ducourtieux, L Saragoza, D Lesenechal, LNE, J-M Lopez-Cuesta, C Longuet, R Sonnier, CMGD, S Duplantier, JP Bertrand, D Calogine, INERIS, B Minisini, ISMANS and D Parisse, PlasticsEurope, France</i>	1375
---	------

Assessment of environmental effects of simulated fires in waste recycling centres <i>Tuomo Rinne, K Tillander, VTT Technical Research Centre of Finland, P Yli-Pirilä, J Ruuskanen, University of Eastern Finland and J Jäntti, T Väisänen, Emergency Services College, Finland</i>	1387
--	------

Fire emissions from products with and without BFRs and the hazard of exposure for fire fighters and clean-up crews <i>Margaret Simonson McNamee, P Blomqvist, P Andersson, SP Technical Research Institute, Sweden and M van den Berg, R Fernandez Canton, Utrecht University, The Netherlands</i>	1399
---	------

Fire hazard analysis of hetero-organic fuels – source characteristics from experiments <i>Berit Andersson, Lund University, Sweden</i>	1411
---	------

Transport of toxic products – comparison of experimental and numerical results part one: Non-sprinklered scenarios <i>Robert Accosta Jr, Ove Arup & Partners, Zachary Magnone, J Crocker, B Xiao, Tyco Fire Suppression & Building Products and N Dembsey, B Meacham, Worcester Polytechnic Institute, USA</i>	1423
---	------

Simulation of critical evacuation conditions for fire scenarios involving cables and comparison of different cables <i>Patrick van Hees, D Nilsson, Lund University, Sweden</i>	1435
--	------

POSTERS.....

HUMAN BEHAVIOUR: EVACUATION AND EGRESS

PeMMA (People Movement Modelling Analysis): A new methodology for helping to address people’s safety in open and enclosed spaces <i>Rodrigo Machado, S Marshall, Mark Anderson, Capita Symonds, UK</i>	1445
---	------

The use of serious gaming in training of team decision making in life threatening situations <i>Margrethe Kobes, E Didderen, Netherlands Institute for Safety, The Netherlands and M van Wijngaarden, ETC Simulation, USA</i>	1449
--	------

Data collection and analysis of evacuation scenarios in Finland <i>Tuomo Rinne, K Tillander, P Grönberg, VTT Technical Research Centre of Finland, Finland</i>	1455
---	------

Study on phased evacuation through the analysis of total evacuation drill in a high-rise office building <i>Ai Sekizawa, T Sano, H Kadokura, D Ooiwa, Tokyo University of Science, Japan</i>	1461
---	------

Implications of computer simulation and experimental studies of evacuation behaviour in the simple-shaped room <i>Tomonori Sano, Waseda University, Y Yoshida, N Takeichi, Y Minegishi, Takenaka Corporation and T Kimura, A & A Co., Ltd., Japan</i>	1467
--	------

The faults with default
Steve Gwynne, Hughes Associates, Inc and E Kuligowski, NIST, USA 1473

Study on the visual environment designs for effective evacuation guidance - Measurement and evaluation of sign installation in escape routes
Yuki Akizuki, S Okuda, M Iwata, T Tanaka, University of Toyama, Japan 1479

Building egress flow rates – Research, application & limitation
Matthew Salisbury, M Slattery, A Slattery, Michael Slattery Associates Fire Engineers, UK & Ireland and T Denby, Axiomatic Technology Limited, UK 1487

FIRE AND EMERGENCY RESPONSE

The provision of a risk information system for the English fire and rescue service
David Berry, FARMSS, UK 1493

Modeling issues in backdraft incident fire reconstruction
Fabio Alaimo Ponziani, A Tinaburri, Ministry of the Interior, Italy 1499

Fire behavior of the wooden heritage building: Tripitaka Storage Hall
Ji-Hee Lee, W-J Kim, Kyungpook National University and S-J Park, K-I Kim, Inje University, Korea 1505

The role and function of lift landing doors in a fire
Chris Marriner, P Jackman, International Fire Consultants Ltd, UK 1511

Rationalizing design requirements for stair pressurization systems
Jamie Stern-Gottfried, S Winter, P Williams, Arup Fire, UK 1517

Supporting integrated risk management planning for the UK fire and rescue services: Evaluation of prevention and protection activities on commercial, public and heritage buildings
Stefan Raue, C Johnson, University of Glasgow and D Bouchlaghem, S Konukcu, Loughborough University, UK 1523

Image quality evaluations for fire service thermal imaging cameras: Subjective vs objective testing
Francine Amon, D Leber, NIST and J Rowe, Hughes Associates, Inc., USA 1531

WPI precision personnel location and tracking system for first responders
R. James Duckworth, D Cyganski, WPI, USA 1537

CFD MODELLING

FDS and OpenMP – A new parallelization approach for fire modelling software
Christian Rogsch, Fire Protection Engineer, Germany 1543

Quantitative risk assessment of shipboard fire by first-principles tools
Camille Azzi, A Pennycott, D Vassalos, University of Strathclyde, UK 1549

Simulations of two-way fluid-structure interactions during a fire with the ANSYS software
Yehuda Sinai, HeatAndFlow Consultancy Limited and J Penrose, ANSYS UK Limited, UK 1557

Best practice in the use of CFD for fire simulation
Bjarne Husted, B Hagen, Stord/Haugesund University College, Norway and K Sommerlund-Thorsen, Danish Institute of Fire and Security Technology, Denmark 1563

Realistic smoke visualisation from computer fire simulations
Richard Chitty, BRE Global Ltd, UK 1569

Simulations of upward flame spread by coupling a pyrolysis model with a CFD calculation
Pieter Rauwoens, J Degroote, S Wasan, J Vierendeels, B Merci, Ghent University, Belgium..... 1575

A method of quantifying user uncertainty in FDS by using Monte Carlo analysis
Tor Lindström, D Lund, Lund University, Sweden..... 1581

Spreading fires in FDS5 modelling (case studies)
Victor Shestopal, Fire Modelling & Computing, M Foley, J Hewitt, E Yii, Arup Fire and F Bakker, Norman Disney & Young, Australia 1587

Towards large eddy simulation of LNG pool fires
Jennifer Wen, Z Chen, S Dembele, Kingston University, UK..... 1593

SUPPRESSION / EXTINGUISHMENT

Experimental investigation of an office fire with a partially impaired sprinkler system
Min-sheng Chiu, C-T Tzeng, T-H Lin, National Cheng-Kung University, Taiwan 1599

Water mist systems for the fire protection of prison cells
Kelvin Annable, BRE Global Ltd, UK..... 1605

FIRE PERFORMANCE OF MATERIALS AND PRODUCTS

Development of expandable flame-retardant plastic tube and its application
Yuichi Nakagawa, AIST, Y Kumagai, Y Tomita, SGC Company Limited, K Saito, Ibaraki Prefectural Government and K Nihei, Industrial Technology Institute of Ibaraki Prefecture, Japan 1611

Assessment of the impact of upholstered furniture on the severity of home fires
Lindsay Osborne, E Zalok, G Hadjisophocleous, Carleton University, Canada 1617

Different approaches for fire source modeling application to Arcueil experiments
Aurélien Thiry, Laboratoire Central de la Préfecture de Police, M Suzanne, Laboratoire Central de la Préfecture de Police / Université de Rouen, A Bellivier, H Bazin, A Coppalle, Université de Rouen, France and C Lautenberger, University of California, USA..... 1623

Ignition and burning behaviour of plastic sheathing of a steel pipe
Ian Bennetts, Noel Arnold and Associates, K Moinuddin, Victoria University of Technology, Y He, University of Western Sydney, D Verghese, Meinhardt Australia Pty Ltd, Australia 1629

Testing and modeling reaction-to-fire performance of pultruded fiber reinforced polymer composites
Aixi Zhou, Z Yu, University of North Carolina at Charlotte, USA..... 1635

MATERIALS FLAMMABILITY

Causes and consequences of sparks on the surface of insulators of middle voltage lines
C D Halevidis, S Anagnostatos, A Polykrati, P Bourkas, National Technical University of Athens and E Koufakis, Public Power Corporation. Greece 1641

FIRE TESTING AND MEASUREMENT TECHNIQUES

Fire behavior comparison of compartment tests conducted in full and partial structures
Brian Grove, United States Department of Justice, Bureau of Alcohol Tobacco Firearms and Explosives Fire Research Lab, USA..... 1647

Experimental charring rates for cross-laminated timber panels compared to calculated charring rates
Kathinka Friquin, Norwegian University of Science and Technology (NTNU), Norway..... 1659

FLAME RETARDANTS

Flame retardancies of olefins and polystyrene with controlled molecular weights
Erika Nakashima, M Yukumoto, K Takeda, Chubu University, T Ihara, Ihara Gosei Co. Ltd. and T Ueno, The University of Tokyo, Japan..... 1665

FIRE RESISTANCE AND STRUCTURAL FIRE PERFORMANCE

Comparison of gypsum board fall-off in wall and floor assemblies exposed to furnace heat
Mohamed Sultan, National Research Council of Canada, Canada 1677

Numerical modelling to determine appropriate levels of glazing fire resistance
Stewart Miles, C Marriner, International Fire Consultants Ltd., UK 1683

The role of moisture in fire spalling of concrete
Robert Jansson, L Boström, SP Fire Technology, Sweden 1689

Failure times of gypsum plasterboards
Alar Just, Resand Ltd, Estonia and J Schmid, J König, SP Trätek, Sweden..... 1695

An investigation into the fire protection of domestic floors containing timber 'I' joists, at service penetrations
William Hay, Falkirk Council and M Cullen, I Sanderson, Glasgow Caledonian University, UK..... 1701

IGNITION AND FLAME SPREAD MODELLING

Experimental investigations of fire spread from movable to fixed fire loads in office fires
Ko-Jen Chen, C-T Tzeng, T-H Lin, C-m Lai, National Cheng-Kung University and M-J Tsai, Ministry of the Interior, Taiwan 1707

Upward flame spread and ignition on inclined surfaces of thin and thick solids
Nina Schjerve, U Schneider, University of Technology Vienna, Austria 1713

Thermal stresses over glass panel under fire
WK Chow, The Hong Kong Polytechnic University, China, C Chow, The Hong Kong Polytechnic University, China / University of Cambridge, UK and Y Gao, Harbin Engineering University, China 1719

Simulating a rail car fire using a flame spread model
Xiaoqin Hu, Z Wang, F Jia, E Galea, University of Greenwich, UK 1725

TRANSPORTATION AND TUNNEL FIRES

Motorcoach tire fire passenger compartment penetration experiments
Erik Johnsson, J Yang, NIST, USA 1731

Parameter study on the global and local flow field in case of fire and forced ventilation in a closed car park
Xavier Deckers, M Jangi, S Haga, B Merci, Ghent University, Belgium 1737

Experimental and computational study on the fire test for railway vehicle seats in a room corner facility
Dong-Chan Lee, D-H Lee, W-S Jung, C-K Lee, Korea Railroad Research Institute, Korea 1743

TRANSEU (Transport Fire Safety Engineering in the European Union)
Alain Sainrat, LNE, France 1751

SMOKE AND TOXICITY

Investigations of smoke gas composition during a car fire
Simone Krüger, A Berger, A Hofmann, U Krause, BAM, Germany 1755

On-line FTIR measurements applied for real electrical cabinet fires
Pascal Zavaleta, D Kaifas, G Basso, L Audouin, IRSN and A Lacoste, BMPM, France 1761

Predicting concentrations of hydrogen cyanide in full scale enclosure fires
Zhaozhi Wang, F Jia, E Galea, University of Greenwich, UK 1769

COMPARTMENT FIRE EXPERIMENTS AND MODELLING

Determination by a CFD code and a global model of the fuel mass loss rate in a confined and mechanically-ventilated compartment fire
Ayoub Nasr, S Suard, IRSN, H El-Rabii, J.-P. Garo, LCD and L Gay, EDF R&D, France 1775

Fire containment by vent opening protectives in the open state
Reidar Stølen, SINTEF NBL, Norway and A Tamim, COWI Gulf, Oman 1783

Numerical simulation of fire spreading in a two-storey residential building
Dionysios Kolaitis, E Asimakopoulou, M Founti, National Technical University of Athens, Greece 1793

Behavior of fire plume ejected from an opening in consideration of side walls near building openings
Yoshifumi Ohmiya, Tokyo University of Science, Japan 1799

FIRE ENGINEERING

Agent based risk assessment of fire safety systems with automated event tree analysis
Farid Akashah, J Zhang, M Delichatsios, FireSERT and H Wang, University of Ulster, UK 1805

FIRE INVESTIGATION AND RECONSTRUCTION

Use of case studies to determine technical deficiencies with respect to fire spread in school buildings subjected to arson fires
Nils Johansson, P van Hees, Lund University, Sweden 1811

Experiences from using students in fire investigation research
Reidar Skrunes, If Insurance Company and A Reidar Nilsen, Stord Haugesund University College, Norway 1817

CODES AND REGULATIONS

Fire safety in timber buildings – First European guideline
Birgit Östman, SP Trätek, Sweden 1823

Fire safety provisions for existing industrial buildings
Frank Jakobs, P van de Leur, DGMR Consulting Engineers, The Netherlands 1829

Performance-based design & regulation: Challenges faced and lessons learned
Brian Meacham, Worcester Polytechnic Institute, USA 1837

LATE PAPERS	1843
The costs and benefits of sprinklers in schools <i>Jeremy Fraser-Mitchell, BRE Global, UK</i>	1845
Electrical cable failure—experiments and simulation <i>Jason Dreisbach, Nuclear Regulatory Commission, S Nowlen, Sandia National Laboratories, K McGrattan, NIST, USA and S Hostikka, VTT Technical Research Centre of Finland, Finland</i>	1857
Influence of magnesium hydroxide as flame retardant in filled polypropylene used in industrial Plasticollar® <i>Daniela Enescu, A Frache, M Lavaselli, G Camino, Politecnico Di Torino and C Campia, S Novara, G Gualtieri, Campia Imballaggi Srl, Italy</i>	1867
Community risk assessment modeling: Results of residential fireground field experiments <i>Adam Barowy, J Averill, BFRL/NIST, Kathy Notarianni, WPI, L Moore-Merrell, International Association of Firefighters and R Santos, Urban Institute, USA</i>	1875
Observations on the generation of toxic products in the NFPA/ISO smoke density chamber <i>Nathan Marsh, R Gann, M Nyden, NIST, USA</i>	1887
Modeling thermoplastic melt spread over different flooring materials <i>Kathryn Butler, NIST, USA and E Oñate, R Rossi, J Marti, S Idelsohn, CIMNE, Spain</i>	1897
Characterization of Combustion Products from Flaming Materials <i>Thomas Z. Fabian, J L. Borgerson, P D. Gandhi, Underwriters Laboratories Inc., USA</i>	2009
Burning Behavior of Live and Dead <i>Pinus Halepensis</i> Needles Using Small Scale Calorimetry Experiments <i>F. Jervis, G. Rein, J. L. Torero, BRE Centre For Fire Safety Engineering, University Of Edinburgh, UK A. Simeón, University of Corsica, France</i>	2025
Author Index	2031
